

Week 7 and 8 Notes

- Learnt about leveraging cloud resources like Google Colab and Google Drive to seamlessly train deep learning models on large multi-class datasets without needing high-end local workstations.
- Learnt about constructing custom convolutional neural networks from scratch using Keras to build automated binary classification pipelines for personal datasets.
- Learnt about using the Hugging Face library's high-level pipeline function to effortlessly bundle tokenization, inference, and post-processing into a single line of code for various NLP tasks.
